

# The true cost of workforce compliance

Managing compliance is one of the major challenges for businesses. It can be a frustrating, time-consuming, administrative headache. But getting it wrong is now more costly than ever.

## Damage to reputation

Safety and compliance incidents can put a stain on your reputation and lead to lost opportunities and a significant drop in revenue.

## Increasingly expensive fines

If something does go wrong, new compliance fines (potentially up to a staggering \$10M) could bring your business to its knees.

## Criminal liability

New regulations would see 10-20 year prison sentences for Industrial Manslaughter. That means it's not just the company at risk, but the people in it.

## The Goal

Ensure your entire workforce has the right qualifications for the job, at all times.

## The Challenge

Existing compliance processes are often inefficient and ineffective, and can increase the risk of unqualified workers slipping through the cracks.

## Typical process

You have a project to complete and need to assign the right workers for the job

HR team emails or calls workers to request proof of credentials

Workers share their documents in multiple formats via email, shared drives, post or fax

HR team wastes huge amounts of time collating, storing and managing documents (taking their time off other important tasks)

With no centralised system, HR team struggles to ensure all workers have the right credentials at all times

## The risks

An unqualified worker ends up on site

A safety incident occurs or work is completed ineffectively

The project is delayed as you find another worker

Key project deadlines are missed

Compliance issues are investigated costing further time and money

Compliance management is too important to be this inefficient. CredShare makes it easy.

# CredShare — workforce compliance made easy.

CredShare is an online platform where you can store, manage, and update all your workforce credentials in one place. Claim back your time, reduce your risk, and improve your compliance with CredShare.

## Single Platform

Manage credentials, setup and manage projects all from one place

## Safe and Secure

AWS multi-layered encryption on all data

## Easy-to-use dashboard

Full visibility of workforce credentials at all times

## Expiry notifications

Get alerts when worker credentials are expiring

## Share and verify

Share to management on-site for easy verification

## How it works

01

Add your workforce to the CredShare dashboard (either individually or by CSV upload)

02

Send credential request notifications to your workforce quickly and simply from within the dashboard

03

Workers upload pictures and details of their creds to the CredShare app (or you can add them yourself from the dashboard)

04

You get full visibility of your entire workforce credentials (including subcontractors) at all times, all in one place

05

Create projects, assign workers, and get up-to-date credential expiry notifications

## Cut your admin time in half

Streamline your credential management and spend less time on admin and more on what matters.

## Reduce your risk

Know that all your workers are qualified at all times. Reduce your risk and never feel like you're in the dark again.

## Run safer, better, faster projects

Improved compliance doesn't just protect yourself from risk, but also improves the quality, efficiency and cost of projects.

## What are Credentials or 'Creds'?

'Credentials' or 'Creds' is a catch-all term for all the documents you and your workers need to do a job. Tickets, licenses, accreditations, identification, inductions, qualifications, documentation – you name it – if it's needed for the job, you can manage it on CredShare.

You're in good company
